SpringerBriefs in History of Science and Technology

Series Editors

Gerard Alberts, University of Amsterdam, Amsterdam, The Netherlands

Theodore Arabatzis, University of Athens, Athens, Greece

Bretislav Friedrich, Fritz Haber Institut der Max Planck Gesellschaft, Berlin, Germany

Ulf Hashagen, Deutsches Museum, Munich, Germany

Dieter Hoffmann, Max-Planck-Institute for the History of Science, Berlin, Germany

Simon Mitton, University of Cambridge, Cambridge, UK

David Pantalony, Ingenium - Canada's Museums of Science and Innovation/ University of Ottawa, Ottawa, ON, Canada

Matteo Valleriani, Max-Planck-Institute for the History of Science, Berlin, Germany

The *SpringerBriefs in the History of Science and Technology* series addresses, in the broadest sense, the history of man's empirical and theoretical understanding of Nature and Technology, and the processes and people involved in acquiring this understanding. The series provides a forum for shorter works that escape the traditional book model. SpringerBriefs are typically between 50 and 125 pages in length (max. ca. 50.000 words); between the limit of a journal review article and a conventional book.

Authored by science and technology historians and scientists across physics, chemistry, biology, medicine, mathematics, astronomy, technology and related disciplines, the volumes will comprise:

1. Accounts of the development of scientific ideas at any pertinent stage in history: from the earliest observations of Babylonian Astronomers, through the abstract and practical advances of Classical Antiquity, the scientific revolution of the Age of Reason, to the fast-moving progress seen in modern R&D;
2. Biographies, full or partial, of key thinkers and science and technology pioneers;
3. Historical documents such as letters, manuscripts, or reports, together with annotation and analysis;
4. Works addressing social aspects of science and technology history (the role of institutes and societies, the interaction of science and politics, historical and political epistemology);
5. Works in the emerging field of computational history.

The series is aimed at a wide audience of academic scientists and historians, but many of the volumes will also appeal to general readers interested in the evolution of scientific ideas, in the relation between science and technology, and in the role technology shaped our world.

All proposals will be considered.

Acknowledgments

Work on this book has involved large amounts of archival research and many personal interviews. In cases where the archives provide keys to the documents, we have referred to the original archival key. In the case of documents that are undated or unsigned, we simply cite by giving the available information. All documents and photographs are cited and used by permission of the archives or holders in personal collections, as indicated in each case. We would like to thank and acknowledge all of the individuals and institutions that cooperated with us on this project, providing us with important information and insights, as well as permission to publish documents and photographs.

We thank the Weizmann Institute of Science Archives, Rehovot, Israel, for their enthusiastic cooperation. In the Weizmann Institute's Department of Applied Mathematics (DAM), we benefited from the kind help of its head, Prof. David Peleg, as well as the administrative assistants, Mr. Raanan Michael and Mrs. Carol Weintraub. They provided us with crucial access to the Chaim Pekeris Archive and to the unpublished transcripts of conversations between the department pioneers. The Weizmann Memorial Organization "Yad Chaim Weizmann" in Rehovot provided us with access to and important guidance at the Chaim Weizmann Archive.

We want to express our sincere and special thanks to Aviezri Fraenkel, a prominent WEIZAC pioneer, for many informative and illuminating conversations. Likewise, we thank the late Gerald Estrin for sharing important information via email interchanges. Heartfelt thanks goes to the women pioneers in computing in Israel, Hana Lifson, Ariela Admon, Dalia Prashker, Nira Dyn, Ruth Sharon, Eugenia Wolf, Chaya Rosental, Michal Politi, and Leah Mory-Rauch. We also want to thank the families and institutions who provided us with photos and allowed us to use them.

We want to thank the scientists who shared with us their work experience with Pekeris: Zeev Luz, Leslie Leiserowitz, the late Hans Jarosch, Saul Abarbanel, Krzysztof Frankowski, Yigal Accad, as well as Meir Weinstein and Gideon Eidelboim.

Estrin and Fraenkel provided access to their private copies of six DVDs with enlightening video interviews conducted with the WEIZAC pioneers at the Weizmann Institute of Science in April 1983. Now, the videos are freely available on a webpage entitled "The Computer Pioneers: Weizmann Institute Video Oral History". https://ethw.org/Archives:The_Computer_Pioneers:_Weizmann_Institute_Video_Oral_History.

Some colleagues were kind enough to read early drafts of this book, or sections of it. For their valuable comments and suggestions, we thank Nurit Kirsch, Snait Gissis, and Sharon Geva. Needless to say, any mistakes or inaccuracies remaining in the text are our exclusive responsibility. We also thank Eilon Kelman and Thom Rofe for their wise editorial assistance.

This research was supported by The Israel Science Foundation (grant No. 472/21).

We are happy to thank our families for their continued support and for the sympathy and appreciation that they always express towards our work.
